✓ = one or more items of the content group are addressed.

KISS topics include suggestions, outlines and descriptions of “hands-on activities” as well as multiple worksheets, some of which are “second-hand data pracs”. The mapping of skills outcomes and content above is based on the assumption that all suggested practical activities, and all worksheets, have been completed. It is further assumed that when practical activities are conducted, that students are challenged to formulate an “Aim” or question to be answered, an hypothesis about the outcome and that they formulate and follow a “Method” involving the Scientific Method of controlled variables, make appropriate observations and measurements with appropriate equipment while working safely following a risk assessment.

It is assumed that students record and analyse their “Results” appropriately in order to draw valid and justifiable “Conclusions” or answers to the questions posed.

The information above is intended as a guide only and should not be relied upon for the purposes of Registration and Accreditation. Ultimately, it is a matter of opinion as to how well or how fully any resource complies with, or addresses the curriculum documents.

No warranty or guarantee is given or implied by the information above.
